

CIVIL AIR PATROL

CITIZENS SERVING COMMUNITIES

eServices Release 27 August 2019

What Changed?

- **Logistics - AMRAD** - *New Application under Logistics Area*

AMRAD is a comprehensive aircraft maintenance tracking system created to support the end to end aircraft discrepancy life cycle, providing real-time visibility to aircraft status, open and closed discrepancies, maintenance & inspection data, maintenance and repair requests, parts order status and parts tracking.

Key Benefits

- Integrates with WMIRS without duplication of entry
 - Efficient system to input and update discrepancy information through completion
 - Reporting capability that reflects aircraft discrepancies and aircraft flight statuses
 - Provides a streamlined process for processing parts orders through vendor facilities
 - Provides real-time cost analysis of billing for aircraft parts orders
- **Professional Development – Specialty Track** – Fixed issue with the requirements for historian master track

If experience any issues with the updates, please submit a [helpdesk](#) ticket using our CAP eServices Helpdesk.
